EMBO Workshop: Hedgehog signalling: From molecular structure to developmental biology and diseases – Sant Feliu de Guíxols April 2023

I recently had the pleasure of attending the "Hedgehog signalling: From molecular structure to developmental biology and diseases; a EMBO Workshop" in Sant Feliu de Guíxols, Spain. The conference was held at a stunning resort directly on the beach, providing an ideal setting for learning and networking.

Despite the beauty of the resort and its surroundings, the water was too cold and full of jellyfish for us to enjoy swimming during our free time. However, the resort offered plenty of other amenities and activities to keep us entertained, the conference provided a unique opportunity to learn about the latest research in the field of Hedgehog signalling, from novel structural insights of the key players to key mechanistic studies and their implications in developmental biology and diseases.

The speakers at the conference were highly knowledgeable and presented their research in a way that was both engaging and informative. The level of collaboration and discussion among the attendees was impressive, and I appreciated the opportunities to interact with others during the poster sessions and breaks. The conference was well-organized, and the setting provided a relaxing and inspiring atmosphere for learning.

Overall, I had a wonderful experience at the "Hedgehog signalling: From molecular structure to developmental biology and diseases; a EMBO Workshop" conference. The resort was extremely beautiful, and the conference itself was highly informative and engaging. I look forward to attending future conferences in this field.
